Research Grants

Funded

2016: Kugele, L. P. Technology Integration Grant, Principal Investigator. A missing component in online classes is the class time devoted to problem solving. This is difficult to replace in an online setting. Students need to see not only the answer but the step by step of the solution. Even using Excel to demonstrate the steps may not be sufficient for all students, particularly for live classes who cannot use Excel on tests. Using the Surface Pro technology could replace that live class room activity with videos of problem solutions that can be viewed and reviewed.

.

2015: Kugele, L. P. WOW Grant, Principal Investigator, University of Mississippi. MBA611 – Financial Analysis – like most finance courses - is very quantitative. This presents unique, well-documented[\[1\]](#),[\[2\]](#) problems in an online course not present in more qualitative fields or in a live classroom setting - challenges in both presenting the material as well as evaluating student understanding and competence with the material.

With the WOW Grant, I want to address those two issues specifically related to effectively teaching and testing quantitative material online.

Significant Change 1 – Add Interactive Tutorials for Problem Solving

Significant Change 2 - Develop a "show your work" solution on exams
